About this document

Overview

The OneContent Patient Folder Release of Information (ROI) Module is a software application that is designed to meet the information management needs of modern organizations. The ROI Module is designed to provide an electronic method of managing requests for patient records.

- The **administration** component of the ROI Module enables ROI administrators to configure and manage informational building blocks that are used to process and manage ROI requests.
- The **end-user** functions of the ROI Module enable ROI users to create, maintain, and manage ROI requests.

Note: This document is effective with the OneContent™ family of products *except* where specifically noted. In addition, readers should assume that information for the OneContent™ Patient Folder product is generally applicable to the OneContent™ Business Folder product as well. For easier readability, such passages may cite only "OneContent Patient Folder."

Purpose

This document describes how to use the ROI Module to create and manage ROI records for patients, requestors, and requests. It also tells you how to generate ROI reports.

Scope

This document contains instructions and screen descriptions for users who need to learn and use the OneContent Patient Folder Release of Information (ROI) module. Installation instructions are provided under separate cover.

Audience

This document is intended for administrators and non-administrator users.

Certified Modular Electronic Health Record

The OneContent™ Patient Folder product is a Certified Modular Electronic Health Record (Drummond Group certification 03242011-1135-8) that manages the capture, indexing and completion processes for health information management. It allows customers to gain maximum efficiencies in the deficiency completion process for encounter-based medical documentation. Further, the product allows customers to determine and manage their legal health record defined for disclosure and release of information in compliance with HIPAA and other government regulations and guidelines. It is intended to support clinical decision-making, to capture and query information relevant to health care quality and to exchange electronic health information with, and integrate such information from other sources.

The OneContent™ Business Folder application is a component of the overall product portfolio and is designed to assist patient financial services (commonly called the Business Office) with the management of transactional data and documents relevant to the billing process. It supports the automatic processing of ANSI 4010/5010 x.12 835 transactions representing explanation of benefit information about claims. It allows customers to define the documents that they collect for their business office operations, indexes them to the respective patient encounter and provides inter-departmental workflow to process these documents in a meaningful way. It is not intended to be a solution or module for Electronic Health Records. It is not intended to support clinical decision-making nor physician order entry. It is not intended to capture nor query information relevant to health care quality, and it is not intended to exchange electronic health information with, and integrate such information from other sources.

Product documentation

This documentation is part of a set developed for the OneContent Patient Folder ROI Module product. The documentation set is issued with each major or point release.

Full user instructions for the OneContent Patient Folder ROI Module are published only as online help. A subset of user instructions is published in PDF format under the following title:

- *OneContent Patient Folder ROI Module Quick-Start Guide*

Installation instructions are published under this title:

- *OneContent Installation Guide for Customers*

Contact your OneContent Customer Support representative if you need further information.

Other documentation you should be familiar with includes documentation for:

- The base OneContent product
- Your host information system
- Third-party scanner, fax, and printer hardware and software

Customer Support

To report all high and critical service orders, authorized customer personnel can contact the OneContent Support Center at 1-800-800-1844 and follow the prompts . Authorized users should continue to submit standard priority service orders through the Customer Portal™ website.

The Customer Portal™ website offers executive messages, company news, a link to product documentation on Download Central website, detailed product support information, product education course offerings, resources such as white papers, and much more.

The Customer Portal also allows registered users to access an online service order submission and tracking tool. You can submit new service orders and view information about service orders that have been logged in the past. In addition, you can access a knowledge base tool, KNOVA, which provides answers to questions about Allscripts document management products used by your enterprise.

This page contains Allscripts proprietary information and is not to be duplicated or disclosed to unauthorized persons.

To navigate to the Customer Portal login page and register, go to https://customerportal.mckesson.com in your Web browser and follow on-screen instructions.

Responding to problems

Use the following procedure to report problems to Customer Support and for follow-up attention.

Standard OneContent issues

Step	If	Then
1	You encounter an issue	1. If working within OneContent, check the online help. 2. Check for a solution in the online knowledge base (KNOVA). 3. Check for a solution in the searchable documentation library available on Download Central.

Not for Distribution
Draft v3 - November 7, 2017

Copyright © 2017 Allscripts Healthcare, LLC and/or its affiliates

This page contains Allscripts proprietary information and is not to be duplicated or disclosed to unauthorized persons

Step	If	Then
2	You do not find the solution in step 1 AND you cannot resolve the issue yourself	1. Determine the number of users affected (one or many). 2. Make a screen print of the issue (if applicable). 3. Attempt to duplicate the issue. 4. Document the necessary steps to reproduce the issue. Include the impact this has on your business operation. 5. Please make note of any changes that were recently made including application of Microsoft patches, software updates, updates on any systems that interface with OneContent, network changes, workflow changes, and new users or queues. 6. Collect as much information about the issue as possible from the appropriate application logs. 7. Report the error to OneContent Patient Folder Customer Support. • To enter service orders online, go to https://customerportal.mckesson.com. • To reach the Customer Support Center, call 1-800-800-1844 and follow the prompts. **Note:** The Customer Support Manual is available in the OneContent Patient Folder section of the Customer Portal.
3	The problem is determined to be a defect	Customer Support notifies OneContent development of the problem and provides you with a tracking number for the defect.

Chapter 1 - Getting Started

The OneContent Patient Folder Release of Information (ROI) Module provides a tool for managing all requests for copies of medical records, including a billing component. The ROI Module enables you to select and release patient information to entities who request patient records, and to easily generate letters, billing notices, and invoices for that service. You can manage and account for the release of both system and non-system records.

Release of Information features enable users to:

- Configure and manage administrative functions including user profile permissions, perform maintenance and configure output settings
- Create and manage patients and view patient information, records and request history
- Create requestors and view their profile and request and account histories
- Manage requestor accounts including adding payments and adjustments, generating statements, and issuing refunds
- Create requests specifying billing and shipping information, output method, and sales tax
- Generate cover letters, statements and invoices (both current and past due)
- Generate reports
- Find overdue invoices
- Configure output settings including queues and devices

Auditing

The ROI Module can maintain an audit trail history of releases and other activity. Audit trail events are configured in the OneContent Patient Folder application for each facility.

Record views in ROI

The Patient Records and Patient Information forms allow you to select record views for subsets of documents associated with the patient's encounters. Record views identify standardized packets of documents for specialized functions such as coding, business office, or clinical. Record views are maintained by the OneContent Patient Folder system administrator. Only one record view can be associated with a request as a default record view. All other record views available to the user are available for selection.

This page contains Allscripts proprietary information and is not to be duplicated or disclosed to unauthorized persons.

Logging on

ROI users must have explicit permission to access the ROI Module (access to ROI functions is controlled within the OneContent Patient Folder application).

Basic ROI permissions allow you to:

- Launch the application
- Search for and view patient information
- Search for and view requestor information
- Search for and view requests
- Print, fax, email or save patient documents to a file
- Generate reports

Additional permissions are required to perform add, change, and delete operations, as well as other operations like cancelling or denying requests.

Each logon attempt is audited, and the same logon ID can have more than one ROI session open at a time.

Logon procedures vary depending on whether your site uses the Directory Services Authentication feature:

- Pre-Release 15.0 systems always use standard system authentication.
- Release 15.0 and later systems have the option of using Directory Services authentication. Directory Services authentication allows you to use your Windows credentials for logging on to OneContent Patient Folder applications.

> **Note:** If you are unsure of which release you are using, at the ROI Module window select Help > About from the menu. The system displays ROI release information. If you are using Release 15.0 (or later) and are unsure whether Directory Services Authentication is enabled, follow instructions for the logon dialog box that matches your screen or ask your supervisor or OneContent Patient Folder system administrator.

Follow instructions for the authentication method used by your site.

Item descriptions

User ID box

Allows you to enter your user ID. Required.

Password

Allows you to enter the password for your user ID. Required. Case-sensitive.

Copyright © 2017Allscripts Healthcare, LLC and/or its affiliates

This page contains Allscripts proprietary information and is not to be duplicated or disclosed to unauthorized persons.

Domain

Allows you to select the applicable domain for your user ID.

Logon errors

If...	Then...
Your logon failed because your User ID and/or password are invalid	The system alerts you and allows you to try again. Click **OK** and try again.
Your logon failed because you used a default password for logon	The system alerts you and requires you to change your password. Click **OK** to close the message box and continue to the Change Password dialog box.
Your logon failed because: • You do not have permission to use the ROI Module • You have exceeded the maximum number of logon attempts allowed • Your account is locked • Your account is inactive • The server is down	The system alerts you to the reason, and you cannot log on. Contact your system administrator.

Not for Distribution
Draft v3 - November 7, 2017

Logging off

Logoff can occur in one of two ways:

- Manually when you choose to log off or exit the application.
- Automatically when the system logs you off because no user activity has occurred within a defined period of time.

During manual logoff or exit events, the system checks whether you have unsaved changes. If you do, the system permits you to:

- Save changes and continue to log off or exit
- Discard changes and continue to log off or exit
- Return to the module and continue your work activities

To log off without closing the module

This logoff method enables you to keep the ROI window open even while you are logged off. This is convenient when, for example, you step away from your workstation for a short time and want to prevent unauthorized access.

Select the **Security > Logoff** menu path, or press **Alt+C+O**.

To log off and close the module

This logoff method enables you to log off and close the ROI Module window in one operation. You must re-launch the module when you want to log back in.

Do either of the following:

- Select the **Security > Exit** menu path, or press **Alt+C+X**.
- Click the ROI window's exit icon ( ).

Chapter 2 - Administrator Tasks

There are numerous administrative functions that must be performed before using the Release of Information (ROI) application.

You can access the online help by doing the following:

1. Launch the ROI application.
2. On the menu bar, click **Help**.
3. From the drop-down list, select **ROI Help**.
4. On the left navigation pane, click the **Admin** bookmark. The bookmark expands and the list of topic displays.
5. Click on a topic to view specific information.

The list below includes all the administrative functions. For more details, refer to the Release of Information online help.

Admin > About Output Settings

About Output Settings

Output Settings comprises the following elements:

- **Chart Configuration** provides the ability to specify output options for all documents output from the chart. The configuration output options are similar to ROI Configuration.
- **Devices** are either physical hardware (such as printers, disc writers) or server software (such as email servers, fax servers, or file servers). Configuring devices usually involves configuring the physical connection to the hardware / server (such as IP address and port, folder name, or user / password).
- **Queues** are logical connections to those devices. Configuring queues may involve setting particular attributes such as: duplex printing for a Print queue; "from" email address and default email subject and body for an Email queue; default password for encrypting PDFs for Email, Disc, and File queues. End users are given permissions to Queues and only interact with Queues in the McKesson OneContent Patient Folderapplication.
- **ROI Configuration** provides the ability to specify output options for all ROI releases and is applicable for all queues. The configuration output options include watermark, header, footer and number of hours to save the completed jobs.

Create a request for a non-patient requestor

This task assumes you want to create a request for a non-patient requestor. Non-patient requestors (such as insurance companies, attorneys, or other entities) often request records for more than one patient at a time. You can select one or more patients to include on the request.

This task describes how to create the request from the Patients tab.

Note: Refer to this online help topic for complete details:
Create a request for a non-patient requestor

Do this...	In this form, dialog box, or screen
1. Perform a patient search.	
2. Select one or more patients whose records are being requested.	Patient Information Form
3. Create a request.	Request Information Form
4. Select a Request Reason and Receipt Date.	Request Information Form
5. Specify a requestor.	Select Requestor dialog box
6. Click **Save and Continue**.

Create a request from the Requestor's tab

This task assumes you want to create a request for a specific requestor (either patient or non-patient).

Note: Refer to this online help topic for complete details:
Create a request for a non-patient requestor

For a non-patient requestor

Do this...	In this form, dialog box, or screen
1. Perform a requestor search.	
2. Select the requestor to associate with the new request and click **Create Request**.	Find Requestor form
3. Select a **Request Reason** and **Receipt Date**.	Request Information form
4. Click **Save**.	

For a patient requestor

Do this...	In this form, dialog box, or screen
1. Perform a requestor search.	
2. Select the requestor to associate with the new request and click **Create Request**.	Find Requestor form

Create a request with patient requesting

This task assumes that you want to create a request for a patient who is requesting his or her own records.

Note: Refer to this online help topic for complete details:
Create a request with patient requesting

Do this...	In this form, dialog box, or screen
1. Perform a patient search.	
2. Select the patient who is requesting records and click **Patient Requesting**.	Find Patient form
3. If the system finds one or more requestors that potentially match the patient, the system displays all found names in the grid. Select the matching entry from the list and click **Select Requestor**. The system proceeds to the Requests > Request Information form.	Create a New Request with the Selected Patient Requesting dialog box
4. If no match is found, the system displays and highlights the patient's name in the grid. Click **Select Patient as Requestor**.	
5. Select **Pre-payment Required** and/or **Certification Letter Required** (when appropriate), review the patient's information and correct it, if needed, and then click **Save New Requestor**.	Save New Patient dialog box
6. Select a **Request Reason** and a **Receipt Date**	Request Information form
7. Click **Save**.

Find a request

This task enables you to search for and select a specific request. The Find function supports a wide variety of search criteria that can be used in any combination, enabling you to narrow results to a concise list of requests.

For example, you can search by:

- Request status (to list all requests with a specific status)
- Patient identifiers (to list all requests for a specific patient, date of birth, SSN, encounter number, MRN, or EPN)
- Requestor identifiers (to list all requests for a specific requestor or requestor type)
- Balance amounts (to list all requests with a balance that is less than, equal to, or more than a specific dollar amount)
- Facility, received date, invoice number, request ID, or completed date

Note: Refer to this online help topic for complete details:
Find a request

Do this...	In this form, dialog box, or screen
1. Select **Requests > Find / Create Request.**	
2. Enter the search criteria.	Find/Create Request form
3. Click **Find Request**.	
4. In the detail pane, select the request you want and click **View/Edit Request**.

Complete a request

This function allows an authorized user to complete a request. You can complete a request in one of two ways:

- Release the documents for the request
- Manually set the status to Complete or Denied

For Auth-Received requests, at the Request Information form you should click **View Authorization Request** to verify information. After you verify information, proceed as usual.

To complete a request by releasing documents

See the online help topic, "Release documents" for details.

To complete a request by changing its status

You cannot set the status to Complete if no documents have been released for the request.

Do this...	In this form, dialog box, or screen
1. Find a request.	
2. Click **Update Request Status.**	Request Information form
3. Select **Completed** or **Denied** for the status.	Update Request Status dialog box
4. Select one or more reasons for the status change.	
5. To create a free-form reason, click **Add Freeform Reason** and enter text.	Update Request Status dialog box
6. Click **Save**.	
7. Click **Save** again.	Request Information form

Create a requestor

The system permits you to create patient and non-patient requestors and prompts for information based on the requestor type you specify. More...

You can create requestors by clicking the New Requestor button from these screens:

- The Requestors > Find Requestors form (this method is described below)
- The Select Requestor (or Change Requestor) dialog box

All methods allow you to enter the same data. However, the system enables or disables data entry fields dynamically, depending on the Requestor Type setting. Basically, patient and non-patient fields are mutually exclusive.

Note: Refer to this online help topic for complete details: **Create a requestor**

To create a patient requestor

Do this...	In this form, dialog box, or screen
1. On the Requestor tab, set **Requestor Type** to Patient.	
2. Enter the search criteria.	
3. Click **New Requestor**.	
4. Select the patient record and click **Select Patient as Requestor**.	Select a Patient to Create New Patient Requestor dialog box
5. Enter requestor information.	Requestor Information form
6. Click **Save**.

Maintain adjustments

This task enables authorized users to add, edit, or remove adjustments. Adjustments are used to credit the requestor's account, for example, to offer the requestor a discount.

To add an adjustment

Do this...	In this form, dialog box, or screen
1. Find a requestor.	Find Requestor form
2. Select **Requestors > Account Management**.	
3. Click **Add Adjustment**.	Account Management form
4. Enter the adjustment details	Adjustments dialog box.
5. Click **Save**.	

To edit an adjustment

You can only edit applied adjustments.

Do this...	In this form, dialog box, or screen
1. Find a requestor.	Find Requestor form
2. Select **Requestors > Account Management**.	
3. Open an invoice to edit.	Account Management form
4. Click the red ✖ to delete the adjustment.	Adjustments dialog box
5. In the **Apply** field, type the correct adjustment amount.	Adjustments dialog box
6. Click **Save**.	Adjustments dialog box
